With sloping roof and terrace

Portable Folding Bicycle

Adding an extra pitched roof above the expandable house's roof and a terrace in front of the door not only provides an additional layer of protection, shades the house, and extends its service life, but also expands the living area and adds a leisure area. This makes the house more functional and versatile.

20FT Flat-top

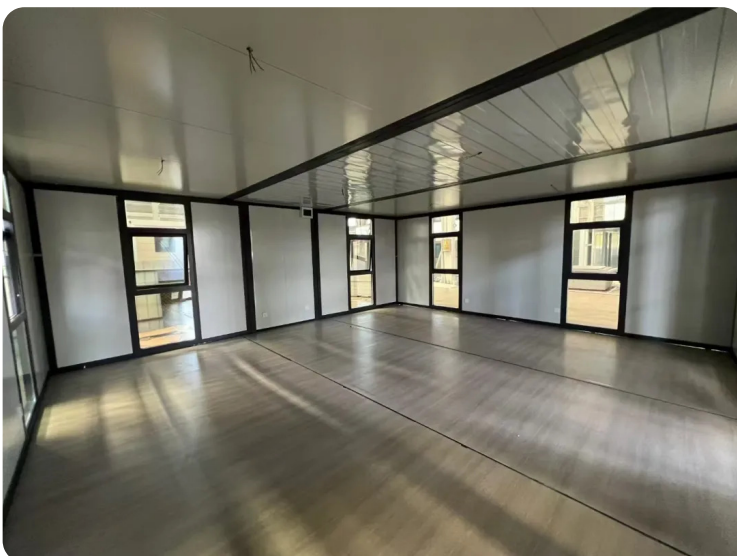

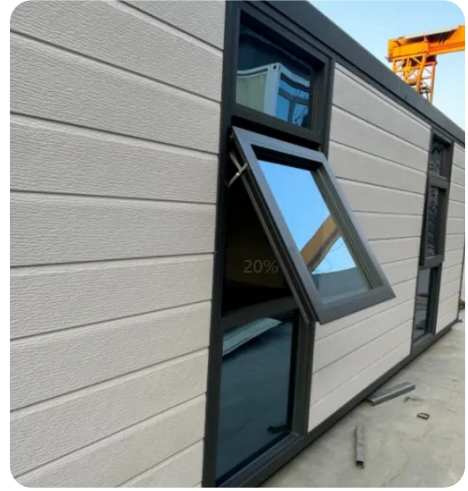

Suitable for offices, training rooms

This is a classic flat-roof expandable house, with a flat roof design that makes the interior more spacious and open compared to traditional pitched roofs. Surrounded by floor-to-ceiling windows, it exudes a modern aesthetic and significantly enhances interior lighting. This design is well-suited for use as a training room, office or activity room. Additionally, the flat roof design makes it ideal for a two-story structure.

20FT Flat-top

Suitable for offices, training rooms

20FT Flat top

A more upscale option

This is a flat-roof expandable house that combines the rustic beauty of Chinese style with the minimalist elegance of Nordic design. The exterior metal embossed panels feature a striking color contrast of Western-style Great Wall White and Great Wall Brown, which is highly favored by young people. The roof is adorned with tile-shaped resin tiles, commonly seen in traditional Chinese architecture, which not only enhances the waterproof performance of the house but also significantly improves its aesthetic appeal. This design is perfect for use as a hotel, guesthouse, or family leisure space.

20 FT Flat-top

Suitable for Homestay, family leisure

With trailer

A Home That Moves with You

Any expandable container house can be customized with a dedicated trailer chassis. This enhances the mobility of the container house, eliminating the need for additional heavy lifting or transportation equipment; a standard trailer or truck can easily tow it. Moreover, it can be rapidly deployed to areas with urgent needs. Importantly, in some countries, having a trailer chassis on the bottom meets certain legal requirements.

With trailer

Customizable trailers

Trailers can be easily connected or detached at any time, offering great mobility and flexibility, making transportation more free and efficient. Trailers can be designed in various tonnages and structures according to different application fields and functional requirements.

20FT Small 700

The version that saves the most ocean freight

This 20-foot small 700mm expandable container house is the most cost-effective version for sea freight. With an area of 28 square meters and a folded dimension of 5900mm x 700mm x 2480mm, 6 units can be loaded into each 40-foot high-cube container. It is ideally suited for rapid mass construction needs, such as project offices, miner accommodations, and earthquake relief efforts.
